

A high strength, high conductivity aluminum cable spacer. These spacers include clamping hardware made of high-tensile aluminum for dependability and durability in the field. Designed for corona free service at 345KV through 500KV.

To facilitate installation and aid in corona free performance, all bolt heads are captivated. When placing an order please specify the desired center distance along with the specific conductor size.

Example: 110-123-CS-12-EHV (2500AAC)

To obtain a cable spacer terminal for (2) 2000 AAC conductors spaced at 8 inches add descriptor “-8-.”

Example: 110-123-CS-8-EHV(2000AAC).

*Specify center distance. ** Specify specific conductor size.
