13-397	6	6	6	6	5/8

A rugged connector for linking pipes of the same size at an angle, the Type BEPP depends on its high conductivity copper alloy for natural resistance to corrosion and stress in the field. To further enhance its clamping strength, all bolts, nuts, and lockwashers are silicon bronze. The recessed bolt heads facilitate single-wrench installation.

Orders for varying angles can be filled by adding a suffix to the catalog number. If, for instance, a 30° angle were required for catalog number 13-352, the number should be written on the order as 13-352-30.
